

THE SUPER BURN EXPLAINED

@PROBABLYNOTHING

What is it?

The Super Burn is a new innovative function that \$NOTHING is the FIRST to introduce to the Blockchain and specifically BSC

What does it do?

When activated, the next buys or buybacks will create a 10x impact on the chart so instead of a chart growing by 1% for a 1 BNB buy it will grow by 5% for the same 1 BNB buy creating a **Green** fomo chart!

NOT a rebase

I'm sure many of you heard of the rebase function that swiped the crypto world few months back but resulted in constant fud due to tokens decreasing from wallets as rebase used to drain the total supply every time it was activated including tokens with holders which resulted in a fake pump & fud. BUT that's not the case with probably nothing!!

With probably nothing we combine the rebase function but without draining the total supply!

The misconception

There is a misconception in the space as many projects claim to burn tokens to raise the price but its not as easy as sending some tokens to burn wallet.

We have been working hard to bring this function to life and finally did it! The contract is one of its kind and provides that utility to pump!

THE SUPER BURN EXPLAINED

Proof of use

The first time we used this function on \$NOTHING was on March 23rd 4:30PM UTC and heres what happened.

We have done a 2 BNB buy on 2 seperate transactions. The first 1 BNB buy was without the Super burn & you can see below that the price increase from \$0.0000000000000241191 to \$0.0000000000000243166 increasing by (+0.8%)

160,019,656,745,750 NOTHING	\$409.08 1.0000 BNB	\$0.0000000000002556 Pc v2
168,230,652,928,698 NOTHING	\$409.08 1.0000 BNB	\$0.0000000000002432 Pc v2
33,752,148,308,008 NOTHING	\$81.41 0.1990 BNB	\$0.0000000000002412 Pc v2

Then we bought another 1 BNB but activated a small LP burn function as buying and the price increased from \$0.0000000000000243166 to \$0.0000000000000255644 increasing by (+5.1%)

160,019,656,745,750 NOTHING	\$409.08 1.0000 BNB	\$0.0000000000002556 Pc v2
168,230,652,928,698 NOTHING	\$409.08 1.0000 BNB	\$0.0000000000002432 Pc v2
33,752,148,308,008 NOTHING	\$81.41 0.1990 BNB	\$0.0000000000002412 Pc v2

SEE THE DIFFERENCE? PROBABLY NOTHING!

So When are we gonna use it?

The function will be timed with correct marketing, listings, buybacks and other bullish news to create that FOREVER FOMO effect the correct way!
